

## Deadly Labs Kit “Kickin’ It” Introduction

Yaama!

The DeadlyScience team, the kids from Acmena Youth Justice Centre and our esteemed colleagues, Dr Alice Motion, Dr Naomi Koh Belic and Ben Knight are so happy you are receiving the Deadly Labs Kit, “Kickin’ It”, funded by the Department of Industry, Science and Resources Maker Projects - Community STEM Engagement grants to support Indigenous youth in juvenile justice settings.

The [Deadly Labs program](#) aims to empower young Indigenous learners with culturally appropriate scientific knowledge in the form of a kit. The “Kickin’ It” kits were created with the children at the Acmena Youth Justice Centre. Each kit includes all the resources needed to deliver four science-based curriculum aligned lessons focusing on sport. The focus of sport was selected by the youth of the Acmena Youth Justice Centre.

The youth from Acmena Youth Justice Centre took ownership of every stage from conception to design of these kits and DeadlyScience aims to distribute kits to learners in youth detention centres across the country. This will not only result in scientific educational resources for all of these children but it will also showcase the entrepreneurial and science skills of the youth from Acmena.

We hope you enjoy conducting these sports based science experiments with the learners at your centre. We would love to hear your feedback.
